

Website News

AimSolder has launched a new website at www.aimalloys.com that provides quick access to product information, technical guides, safety data sheets, and technical data sheets.

The Cranston, R.I.-based company is a provider of standard and custom industrial-grade metals and alloys for casting, plating, and soldering for the industrial and plumbing industries.

The Milwaukee-based **Industrial Perforators Association (IPA)** has refreshed the look and functionality of its online Knowledge Center. The site, at www.iperf.org/knowledge-center, serves as a central resource of education and information on how to apply, specify, buy, design, and build with perforated metal.

The site integrates user experience best practices to provide visitors with tips, techniques, and product information. Visitors have access to downloadable information on perforated metal patterns and guides by vertical industry, articles written by IPA members in industry publications, case histories, and links to view the latest e-mail newsletters from the association.

Menomonee Falls, Wis.-based **Messer Cutting Systems**, a manufacturer of oxyfuel, plasma, and laser plate cutting systems, has launched a new social website at www.plasma-cuttingpros.com for metal cutting professionals to share insights on their industry.

The website differs from the company's business website at www.messer-cs.com because it asks customers to submit their testimonials, photos, and videos to share with the public. It features art, shipbuilding, automotive, and specialty industries. More industries will be added in the future, including construction, electronics, energy, medical, plastics, recycling, and robotics.
